Stress Engineering Services and DeepMar Consulting: An Integrated Team

Stress Engineering Services (SES) and DeepMar Consulting form an integrated team, together offering a broader scope of services to support our clients.

The partnership is focused on seamless 'end-to-end' solutions that address the entire life of field across all disciplines: drilling/completion; production/asset; intervention; and flow assurance.

Taking advantage of core competencies from both companies and a combined experience of more than 75 years in the oil and gas industry, the partnership works alongside clients to increase assurance of successful projects in regards to HSE, reliability, and value/efficiency.

Helping you 'do more with less'

With increasingly complex wells being constructed in a challenging economic climate, risk is commonly being driven up with assurance activities not keeping pace.

Combining real-time captured data, post-processing analytics and predictive simulation results to guide in-field decision-making, we can improve safety and reliability and provide seamless integration of verification and validation processes.
